	112120	12 x 120 cm	5 pcs/crt

The PUR-material for our Floats was developed especially for this purpose and will be mixed in our factory. This will guarantee more output of the Float with also a lower input of power. The edges are milled, to avoid a digging of the Float into the Plaster because of the harder skin. Our PUR-System contains more than 25 per cent material from renewable resources and makes so a contribution to a better environment.

In-between sizes are possible

The Poly-Urethane Handle is foamed directly onto the plywood. This makes a nearly non-detachable connection without nails or clamps. The seven layers of plywood are waterproof glued. All layers are from Abachi Wood. This is the only Wood that is suitable for that purpose. This Wood ensures appropriate hardness and no fibres. It is nearly free of knots. Our Abachi Wood originates from tree sustainable sources.

The Carrier-Float is made from Poly-Urethan and is thermally distortion-free.

They are very light and save so energy demand during the work.

The adhesion is full-surface to the Layer. This has the advantage that no stripes will be on the plaster when the sponge is rubbed and thinner.

Spare Layers are available for all articles.
